WELCOME LETTER

25th Annual Meeting & Scientific Session
AMED Dental Microscopy Meeting

November
5-8, 2026

AMED 2026 BIOMIMETIC & MAGNIFICATION SUMMIT

The most perfect collaboration between high magnification and ultra conservative dentistry is coming. The AMED Biomimetic and Magnification Summit will take place in Honolulu, Hawaii November 5-8, 2026. This groundbreaking meeting will provide the most complete program for ALL dentists who want to perform state of the art dentistry and be at the top of their game.

The program will have an expert and star-studded line up of clinicians who will present a continuum from the most basic principles of biomimetic restorative dentistry to the most advanced and technically challenging reconstructions. All the dentistry will showcase the importance of using a variety of magnification techniques including the “gold standard” for magnification: the dental surgical microscope.

Whether you are a beginner to conservative dentistry and the techniques of adhesive dentistry or you are a skilled veteran of advanced procedures restoring the dentition with biomimetic principles there is something for you.

The program has a lecture format as well as hands-on workshops for the doctors to hone their skill set to a fine point. This experience is specifically designed so each dentist will be able to return to practice and immediately incorporate the principles and techniques learned at this summit.

We urge every dentist to attend this program of revolutionary presentations and information never before seen or presented. There will be a special hygiene day presented parallel to the Biomimetic and Magnification Summit in the very same hotel. Be sure to bring your hygienist to this educational opportunity while you attend the Summit.

Be absolutely sure to register early because there is a limit to the number of attendees accepted.

In addition to the two days of lectures there will be hands-on workshops presented. They include advanced anterior composite restorations, full mouth rehabilitation with both direct and indirect restorative materials, ergonomics for the dental practioner for your health, your back, and your career, the restoration of the endodontically treated tooth, and advanced techniques to maximize the bond to tooth structure.

As always AMED will offer certification testing for certification as an AMED Certified Microscope Dentist.

This is a meeting that is a “MUST ATTEND” for all dentists! More details will be coming but for now register for the meeting and make your hotel accommodation.
